

Computerized Balance Training System Restores Independence and Quality of Life.

Healthy Life Therapy & Rehab Center located in Plantation, Florida has been utilizing the SportKAT® balance training system consistently for the past 24 months. Their experiences with this unique therapy system are detailed below.

“The SportKAT® balance training system has had significant gains in all of my patients,” said Karyn Gold, RPTA at Healthy Life & Rehab Center, “not only do they exhibit improvements in balance, they also exhibit an increase in confidence, which is particularly crucial for older adults.”

One 76 year-old patient, who began a training program in Jan. 2007, depicted below exhibited strong results.

“By the time the patients’ sessions were concluded, her improvements were so dramatic, she and her husband were elated. She felt so confident her quality of life was restored, she would not need to continue with physical therapy when she returned home to Connecticut,” concluded Karyn Gold.

- Static test scores greater than 700 have been shown to be abnormal.
- Visual dominance was reduced by more than 80%
